

How to Install RemoteStaff Screen Capture (RSSC) for Linux Users

1. Install pip or easy_install using your favorite package manager (apt-get, aptitude, etc.)
2. Install python modules (wxpython,twisted,opencv,pil/Python Imaging,platform,psutil), example using pip: pip install wxpython)
3. Install external programs: xprop, notify-send using package manager of choice
4. Extract rssc_linux_2013-06-14.tbz into directory of choice
5. Run ./start_rssc.sh
6. You are also able to run the RSSC via WINE (Windows Emulator). From their console, run the installer like this:

```
wine ThinkInnovationsInstaller.exe
```

7. Note that Linux user will also be required to install the redistributable package from Microsoft click [here](#) to download. After downloading, execute it on their console:

```
wine vcredist_x86.exe
```
